

# DIRECT SEAFOODS WASTE & CARBON REDUCTION UPDATE

**Direct Seafoods are proud to currently be zero to landfill!**

*How did we achieve this?*

Any of our waste that can be recycled, is recycled, such as, cardboard, plastic and polystyrene.

Our general waste is sent to a material recycling facility, where anything that can be recycled is removed and recycled and any general waste left goes into energy from the waste facility where it is burned and turned into electricity.

Food waste (in our case, fish) is classed as a bi-product and is turned into fertiliser or fish food.

## **Fleet Emissions**

To help improve our carbon footprint, we recently replaced our fleet of vehicles with Euro VI 3.5 tonne vans.

A Euro VI, is the latest standards introduced by the European Commission to regulate the level of pollutants released from the tail-pipes of vehicle engines.

Euro VI aims to reduce the levels of harmful emissions including nitrogen oxide, carbon monoxide and particulate matter, (soot from diesel engines).
